C JSON Runtime Library Functions

The C run-time JSON library contains functions used to encode/decode data in Javascript object notation (JSON). These functions are identified by their rtJson prefixes.
Chapter 2

Module Index

2.1 Modules

Here is a list of all modules:

- JSON encode functions. ............................................................... 6
- JSON decode functions. ............................................................. 20
Chapter 3

Class Index

3.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

- OSJSONMessageBuffer ......................................................... 48
- OSJSONDecodeBuffer .......................................................... 38
- OSJSONEncodeBuffer .......................................................... 41
- OSJSONEncodeStream .......................................................... 44
Chapter 4

Class Index

4.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

- **OSJSONDecodeBuffer** (Derived from the **OSJSONMessageBuffer** base class) ........................................ 38
- **OSJSONEncodeBuffer** (Derived from the **OSJSONMessageBuffer** base class) ................................. 41
- **OSJSONEncodeStream** (Derived from the **OSJSONMessageBuffer** base class) ................................. 44
- **OSJSONMessageBuffer** (The JSON message buffer class is derived from the **OSMessageBuffer** base class) 48
Chapter 5

File Index

5.1 File List

Here is a list of all documented files with brief descriptions:

- OSJSONDecodeBuffer.h (JSON decode buffer or stream class definition) ........................................ 50
- OSJSONEncodeBuffer.h (JSON encode message buffer class definition) ........................................... 51
- OSJSONEncodeStream.h (JSON encode stream class definition) ....................................................... 52
- OSJSONMessageBuffer.h (JSON encode/decode buffer and stream base class) ................................. 53
- osrtjson.h (JSON low-level C encode/decode functions) .................................................................. 54
- rtJsonCppMsgBuf.h (This file is deprecated) ..................................................................................... 60
- rtJsonExternDefs.h (JSON external definitions macro) ................................................................. 61
Chapter 6

Module Documentation

6.1 JSON encode functions.

Functions

- EXTERNJSON int rtJsonEncAnyAttr (OSCTXT *pctxt, const OSRTDList *pvalue)
  This function encodes a list of OSAnyAttr attributes in which the name and value are given as a UTF-8 string.

- EXTERNJSON int rtJsonEncIntValue (OSCTXT *pctxt, OSINT32 value)
  This function encodes a variable of the XSD integer type.

- EXTERNJSON int rtJsonEncInt64Value (OSCTXT *pctxt, OSINT64 value)
  This function encodes a variable of the XSD integer type.

- EXTERNJSON int rtJsonEncBase64StrValue (OSCTXT *pctxt, OSUINT32 nocts, const OSOCTET *value)
  This function encodes a variable of the XSD base64Binary type.

- EXTERNJSON int rtJsonEncBoolValue (OSCTXT *pctxt, OSBOOL value)
  This function encodes a variable of the XSD boolean type.

- EXTERNJSON int rtJsonEncGYear (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
  This function encodes a numeric gYear value into a JSON string representation.

- EXTERNJSON int rtJsonEncGYearMonth (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
  This function encodes a numeric gYearMonth value into a JSON string representation.

- EXTERNJSON int rtJsonEncGMonth (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
  This function encodes a numeric gMonth value into a JSON string representation.

- EXTERNJSON int rtJsonEncGMonthDay (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
  This function encodes a numeric gMonthDay value into a JSON string representation.

- EXTERNJSON int rtJsonEncGDay (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
  This function encodes a numeric gDay value into a JSON string representation.

- EXTERNJSON int rtJsonEncDate (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
This function encodes a variable of the XSD ‘date’ type as a string.

- EXTERNJSON int rtJsonEncTime (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
  This function encodes a variable of the XSD ‘time’ type as a JSON string.

- EXTERNJSON int rtJsonEncDateTime (OSCTXT *pctxt, const OSXSDDateTime *pvalue)
  This function encodes a numeric date/time value into a string representation.

- EXTERNJSON int rtJsonEncDecimalValue (OSCTXT *pctxt, OSREAL value, const OSDecimalFmt *pFmtSpec)
  This function encodes a value of the XSD decimal type.

- EXTERNJSON int rtJsonEncDoubleValue (OSCTXT *pctxt, OSREAL value, const OSDoubleFmt *pFmtSpec)
  This function encodes a value of the XSD double or float type.

- EXTERNJSON int rtJsonEncFloatValue (OSCTXT *pctxt, OSREAL value, const OSDoubleFmt *pFmtSpec)
  This function encodes a variable of the XSD float type.

- EXTERNJSON int rtJsonEncHexStr (OSCTXT *pctxt, OSSIZE nocts, const OSOCTET *data)
  This function encodes a variable of the XSD hexBinary type.

- EXTERNJSON int rtJsonEncBitStrValue (OSCTXT *pctxt, OSUINT32 nbits, const OSOCTET *data)
  This function encodes a variable of the ASN.1 Bit string type.

- EXTERNJSON int rtJsonEncIndent (OSCTXT *pctxt)
  This function adds indentation whitespace to the output stream.

- EXTERNJSON int rtJsonEncStringObject (OSCTXT *pctxt, const OSUTF8CHAR *name, const OSUTF8CHAR *value)
  This function encodes a JSON object containing a string value.

- EXTERNJSON int rtJsonEncStringObject2 (OSCTXT *pctxt, const OSUTF8CHAR *name, size_t nameLen, const OSUTF8CHAR *value, size_t valueLen)
  This function encodes a JSON object containing a string value.

- EXTERNJSON int rtJsonEncStringPair (OSCTXT *pctxt, const OSUTF8CHAR *name, const OSUTF8CHAR *value)
  This function encodes a name/value pair.

- EXTERNJSON int rtJsonEncStringPair2 (OSCTXT *pctxt, const OSUTF8CHAR *name, size_t nameLen, const OSUTF8CHAR *value, size_t valueLen)
  This function encodes a name/value pair.

- EXTERNJSON int rtJsonEncStringValue (OSCTXT *pctxt, const OSUTF8CHAR *value)
  This function encodes a variable of the XSD string type.

- EXTERNJSON int rtJsonEncStringValue2 (OSCTXT *pctxt, const OSUTF8CHAR *value, size_t valueLen)
  This function encodes a variable of the XSD string type.

- EXTERNJSON int rtJsonEncStringNull (OSCTXT *pctxt)
This function encodes an asn.1 NULL type as string.

- **EXTERNJSON int rtJsonEncStringRaw (OSCTX pctxt, const OSUTF8CHAR *value)**  
  This function encodes a raw string without any quotation.

- **EXTERNJSON int rtJsonEncUnicodeData (OSCTX pctxt, const OSUNICHAR *value, OSSIZE nchars)**  
  This function encodes a variable that contains UCS-2 / UTF-16 characters.

- **EXTERNJSON int rtJsonEncUCS4Data (OSCTX pctxt, const OS32BITCHAR *value, OSSIZE nchars)**  
  This function encodes a variable that contains UCS-4 / UTF-32 characters.

- **EXTERNJSON int rtJsonEncUIntValue (OSCTX pctxt, OSUINT32 value)**  
  This function encodes a variable of the XSD unsigned integer type.

- **EXTERNJSON int rtJsonEncUInt64Value (OSCTX pctxt, OSUINT64 value)**  
  This function encodes a variable of the XSD integer type.

- **EXTERNJSON int rtJsonEncStartObject (OSCTX pctxt, const OSUTF8CHAR *name, OSBOOL no-Comma)**  
  This function encodes the beginning of a JSON object.

- **EXTERNJSON int rtJsonEncEndObject (OSCTX pctxt)**  
  This function encodes the end of a JSON object.

- **EXTERNJSON int rtJsonEncBetweenObject (OSCTX pctxt)**  
  This function encodes the characters separating the JSON name and value.

### 6.1.1 Function Documentation

#### 6.1.1.1 **EXTERNJSON int rtJsonEncAnyAttr (OSCTX *pctxt, const OSRTDList *pvalue)**

This function encodes a list of OSAnyAttr attributes in which the name and value are given as a UTF-8 string.

**Parameters**

- `pctxt` Pointer to context block structure.
- `pvalue` List of attributes.

**Returns**

Completion status of operation:

- 0 = success,
- negative return value is error.

#### 6.1.1.2 **EXTERNJSON int rtJsonEncBase64StrValue (OSCTX *pctxt, OSUINT32 nocts, const OSOCTET *value)**

This function encodes a variable of the XSD base64Binary type.
Parameters

\textit{pctxt} Pointer to context block structure.
\textit{nocts} Number of octets in the value string.
\textit{value} Value to be encoded.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.3 EXTERNJSON int rtJsonEncBetweenObject (OSCTXT * \textit{pctxt})

This function encodes the characters separating the JSON name and value.

Parameters

\textit{pctxt} Pointer to context block structure.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.4 EXTERNJSON int rtJsonEncBitStrValue (OSCTXT * \textit{pctxt}, OSUINT32 \textit{nbits}, const OSOCTET * \textit{data})

This function encodes a variable of the ASN.1 Bit string type.

Parameters

\textit{pctxt} Pointer to context block structure.
\textit{nbits} Number of bits in the value string.
\textit{data} Value to be encoded.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.5 EXTERNJSON int rtJsonEncBoolValue (OSCTXT * \textit{pctxt}, OSBOOL \textit{value})

This function encodes a variable of the XSD boolean type.

Parameters

\textit{pctxt} Pointer to context block structure.
value  Boolean value to be encoded.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.6  EXTERNJSON int rtJsonEncDate (OSCTX * pctxt, const OSXSDDateTime * pvalue)
This function encodes a variable of the XSD 'date' type as a string.
This version of the function is used to encode an OSXSDDateTime value into CCYY-MM-DD format.

Parameters
pctxt  Pointer to context block structure.
pvalue  OSXSDDateTime type pointer points to a OSXSDDateTime value to be encoded.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.7  EXTERNJSON int rtJsonEncDateTime (OSCTX * pctxt, const OSXSDDateTime * pvalue)
This function encodes a numeric date/time value into a string representation.

Parameters
pctxt  Pointer to context block structure.
pvalue  Pointer to value to be encoded.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.8  EXTERNJSON int rtJsonEncDecimalValue (OSCTX * pctxt, OSREAL value, const OSDecimalFmt * pFmtSpec)
This function encodes a value of the XSD decimal type.

Parameters
pctxt  Pointer to context block structure.
value  Value to be encoded.
pFmtSpec  Pointer to format specification structure.
Returns
Completion status of operation:
  • 0 = success,
  • negative return value is error.

6.1.1.9  EXTERNJSON int rtJsonEncDoubleValue (OSCTXT * pctxt, OSREAL value, const OSDoubleFmt * pFmtSpec)

This function encodes a value of the XSD double or float type.

Parameters
  pctxt  Pointer to context block structure.
  value  Value to be encoded.
  pFmtSpec  Pointer to format specification structure.

Returns
Completion status of operation:
  • 0 = success,
  • negative return value is error.

6.1.1.10  EXTERNJSON int rtJsonEncEndObject (OSCTXT * pctxt)

This function encodes the end of a JSON object.

Parameters
  pctxt  Pointer to context block structure.

Returns
Completion status of operation:
  • 0 = success,
  • negative return value is error.

6.1.1.11  EXTERNJSON int rtJsonEncFloatValue (OSCTXT * pctxt, OSREAL value, const OSDoubleFmt * pFmtSpec)

This function encodes a variable of the XSD float type.

Parameters
  pctxt  Pointer to context block structure.
  value  Value to be encoded.
  pFmtSpec  Pointer to format specification structure.

Returns
Completion status of operation:
  • 0 = success,
  • negative return value is error.
6.1.1.12 EXTERNJSON int rtJsonEncGDay (OSCTX T * pctxt, const OSXSDDateTime * pvalue)

This function encodes a numeric gDay value into a JSON string representation.

Parameters

- **pctxt**  Pointer to context block structure.
- **pvalue**  Pointer to value to be encoded.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

6.1.1.13 EXTERNJSON int rtJsonEncGMonth (OSCTX T * pctxt, const OSXSDDateTime * pvalue)

This function encodes a numeric gMonth value into a JSON string representation.

Parameters

- **pctxt**  Pointer to context block structure.
- **pvalue**  Pointer to value to be encoded.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

6.1.1.14 EXTERNJSON int rtJsonEncGMonthDay (OSCTX T * pctxt, const OSXSDDateTime * pvalue)

This function encodes a numeric gMonthDay value into a JSON string representation.

Parameters

- **pctxt**  Pointer to context block structure.
- **pvalue**  Pointer to value to be encoded.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.
6.1.1.15  EXTERNJSON int rtJsonEncGYear (OSCTX ∗ pctxt, const OSXSDDateTime ∗ pvalue)

This function encodes a numeric gYear value into a JSON string representation.

Parameters

  pctxt  Pointer to context block structure.
  pvalue Pointer to value to be encoded.

Returns

Completion status of operation:
  • 0 = success,
  • negative return value is error.

6.1.1.16  EXTERNJSON int rtJsonEncGYearMonth (OSCTX ∗ pctxt, const OSXSDDateTime ∗ pvalue)

This function encodes a numeric gYearMonth value into a JSON string representation.

Parameters

  pctxt  Pointer to context block structure.
  pvalue Pointer to value to be encoded.

Returns

Completion status of operation:
  • 0 = success,
  • negative return value is error.

6.1.1.17  EXTERNJSON int rtJsonEncHexStr (OSCTX ∗ pctxt, OSSIZE nocts, const OSOCTET ∗ data)

This function encodes a variable of the XSD hexBinary type.

Parameters

  pctxt  Pointer to context block structure.
  nocts  Number of octets in the value string.
  data  Value to be encoded.

Returns

Completion status of operation:
  • 0 = success,
  • negative return value is error.
6.1.18 EXTERNJSON int rtJsonEncIndent (OSCTXT * pctxt)

This function adds indentation whitespace to the output stream.
The amount of indentation to add is determined by the level member variable in the context structure and the OSXM-LINDENT constant value.

Parameters

  pctxt  Pointer to context block structure.

Returns

Completion status of operation:
  • 0 = success,
  • negative return value is error.

6.1.19 EXTERNJSON int rtJsonEncInt64Value (OSCTXT * pctxt, OSINT64 value)

This function encodes a variable of the XSD integer type.
This version of the function is used for 64-bit integer values.

Parameters

  pctxt  Pointer to context block structure.
  value  Value to be encoded.

Returns

Completion status of operation:
  • 0 = success,
  • negative return value is error.

6.1.20 EXTERNJSON int rtJsonEncIntValue (OSCTXT * pctxt, OSINT32 value)

This function encodes a variable of the XSD integer type.

Parameters

  pctxt  Pointer to context block structure.
  value  Value to be encoded.

Returns

Completion status of operation:
  • 0 = success,
  • negative return value is error.
This function encodes the beginning of a JSON object.

Parameters

- **pctxt**: Pointer to context block structure.
- **name**: Object name token to be encoded.
- **noComma**: If TRUE do not print comma at end of line in output.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

This function encodes an asn.1 NULL type as string.

Parameters

- **pctxt**: Pointer to context block structure.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

This function encodes a JSON object containing a string value.

Parameters

- **pctxt**: Pointer to context block structure.
- **name**: Name token to be encoded.
- **value**: Value as a character string to be encoded.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.
6.1.1.24  EXTERNJSON int rtJsonEncStringObject2 (OSCTXT * pctxt, const OSUTF8CHAR * name, size_t nameLen, const OSUTF8CHAR * value, size_t valueLen)

This function encodes a JSON object containing a string value.

Parameters

\textit{pctxt}  Pointer to context block structure.
\textit{name}  Name token to be encoded.
\textit{nameLen}  Length of the name token to be encoded.
\textit{value}  Value as a character string to be encoded.
\textit{valueLen}  Length of the value to be encoded.

Returns

Completion status of operation:

\begin{itemize}
  \item 0 = success,
  \item negative return value is error.
\end{itemize}

6.1.1.25  EXTERNJSON int rtJsonEncStringPair (OSCTXT * pctxt, const OSUTF8CHAR * name, const OSUTF8CHAR * value)

This function encodes a name/value pair.

The value is a character string.

Parameters

\textit{pctxt}  Pointer to context block structure.
\textit{name}  Name token to be encoded.
\textit{value}  Value as a character string to be encoded.

Returns

Completion status of operation:

\begin{itemize}
  \item 0 = success,
  \item negative return value is error.
\end{itemize}

6.1.1.26  EXTERNJSON int rtJsonEncStringPair2 (OSCTXT * pctxt, const OSUTF8CHAR * name, size_t nameLen, const OSUTF8CHAR * value, size_t valueLen)

This function encodes a name/value pair.

The value is a character string.

Parameters

\textit{pctxt}  Pointer to context block structure.
\textit{name}  Name token to be encoded.
\textit{nameLen}  Length of the name token to be encoded.
value  Value as a character string to be encoded.
valueLen  Length of the value to be encoded.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.27  EXTERNJSON int rtJsonEncStringRaw (OSCTXT * pctxt, const OSUTF8CHAR * value)
This function encodes a raw string without any quotation.

Parameters
pctxt  Pointer to context block structure.
value  String value to be written.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.28  EXTERNJSON int rtJsonEncStringValue (OSCTXT * pctxt, const OSUTF8CHAR * value)
This function encodes a variable of the XSD string type.

Parameters
pctxt  Pointer to context block structure.
value  XML string value to be encoded.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.1.1.29  EXTERNJSON int rtJsonEncStringValue2 (OSCTXT * pctxt, const OSUTF8CHAR * value, size_t valueLen)
This function encodes a variable of the XSD string type.

Parameters
pctxt  Pointer to context block structure.
value  XML string value to be encoded.
valueLen  Length of the XML string to be encoded.
Returns

Completion status of operation:

• 0 = success,

• negative return value is error.

6.1.1.30 EXTERNJSON int rtJsonEncTime (OSCTXT * pctxt, const OSXSDDateTime * pvalue)

This function encodes a variable of the XSD 'time' type as a JSON string.

Parameters

pctxt Pointer to context block structure.
pvalue OSXSDDateTime type pointer points to a OSXSDDateTime value to be encoded.

Returns

Completion status of operation:

• 0 = success,

• negative return value is error.

6.1.1.31 EXTERNJSON int rtJsonEncUCS4Data (OSCTXT * pctxt, const OS32BITCHAR * value, OSSIZE nchars)

This function encodes a variable that contains UCS-4 / UTF-32 characters.

Parameters

pctxt Pointer to context block structure.
value UCS-4 characters to be encoded.
nchars Number of characters to be encoded.

Returns

Completion status of operation:

• 0 = success,

• negative return value is error.

6.1.1.32 EXTERNJSON int rtJsonEncUInt64Value (OSCTXT * pctxt, OSUINT64 value)

This function encodes a variable of the XSD integer type.

This version of the function is used when constraints cause an unsigned 64-bit integer variable to be used.

Parameters

pctxt Pointer to context block structure.
value Value to be encoded.

Returns

Completion status of operation:

• 0 = success,

• negative return value is error.
6.1.1.33  EXTERNJSON int rtJsonEncUIntValue (OSCTXT * pctxt, OSUINT32 value)

This function encodes a variable of the XSD unsigned integer type.

Parameters

    pctxt  Pointer to context block structure.
    value  Value to be encoded.

Returns

    Completion status of operation:
    • 0 = success,
    • negative return value is error.

6.1.1.34  EXTERNJSON int rtJsonEncUnicodeData (OSCTXT * pctxt, const OSUNICHAR * value, OSSIZE nchars)

This function encodes a variable that contains UCS-2 / UTF-16 characters.

Parameters

    pctxt  Pointer to context block structure.
    value  UCS-2 characters to be encoded.
    nchars Number of Unicode characters to be encoded.

Returns

    Completion status of operation:
    • 0 = success,
    • negative return value is error.
6.2 JSON decode functions.

Functions

- EXTERNJSON int rtJsonDecAnyElem (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This function decodes an arbitrary block of JSON-encoded data into a string variable.

- EXTERNJSON int rtJsonDecAnyElem2 (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This version of rtJsonDecAnyElem assumes the element name has been pushed on the element name stack in the context.

- EXTERNJSON int rtJsonDecAnyType (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This function decodes an arbitrary block of JSON-encoded data into a string variable.

- EXTERNJSON int rtJsonDecBase64Str (OSCTXT *pctxt, OSOCTET *pvalue, OSUINT32 *pnocts, size_t bufsize)
  This function decodes a contents of a Base64-encode binary string into a static memory structure.

- EXTERNJSON int rtJsonDecDynBase64Str (OSCTXT *pctxt, OSDynOctStr *pvalue)
  This function decodes a contents of a Base64-encode binary string.

- EXTERNJSON int rtJsonDecBool (OSCTXT *pctxt, OSBOOL *pvalue)
  This function decodes a variable of the boolean type.

- EXTERNJSON int rtJsonDecDate (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'date' type.

- EXTERNJSON int rtJsonDecTime (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'time' type.

- EXTERNJSON int rtJsonDecDateTime (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'dateTime' type.

- EXTERNJSON int rtJsonDecGYear (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gYear' type.

- EXTERNJSON int rtJsonDecGYearMonth (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gYearMonth' type.

- EXTERNJSON int rtJsonDecGMonth (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gMonth' type.

- EXTERNJSON int rtJsonDecGMonthDay (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gMonthDay' type.

- EXTERNJSON int rtJsonDecGDay (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gDay' type.

- EXTERNJSON int rtJsonDecDecimal (OSCTXT *pctxt, OSREAL *pvalue, int totalDigits, int fractionDigits)
  This function decodes the contents of a decimal data type.
• EXTERNJSON int rtJsonDecDouble (OSCTX∗pctxt, OSREAL∗pvalue)
  This function decodes the contents of a float or double data type.

• EXTERNJSON int rtJsonDecHexStr (OSCTX∗pctxt, OSOCTET∗pvalue, OSUINT32∗pnocts, size_t buFSIZE)
  This function decodes the contents of a hexBinary string into a static memory structure.

• EXTERNJSON int rtJsonDecDynHexStr (OSCTX∗pctxt, OSDynOctStr∗pvalue)
  This function decodes the contents of a hexBinary string.

• EXTERNJSON int rtJsonDecDynBitStr (OSCTX∗pctxt, OSUINT32∗nbits, OSOCTET∗∗data)
  This function decodes a variable of the ASN.1 Bit string type.

• EXTERNJSON int rtJsonDecBitStrValue (OSCTX∗pctxt, OSUINT32∗nbits, OSOCTET∗data, OSSIZE buFSIZE)
  This function decodes a variable of the ASN.1 Bit string type.

• EXTERNJSON int rtJsonDecInt8Value (OSCTX∗pctxt, OSINT8∗pvalue)
  This function decodes the contents of an 8-bit integer data type (i.e.

• EXTERNJSON int rtJsonDecInt16Value (OSCTX∗pctxt, OSINT16∗pvalue)
  This function decodes the contents of a 16-bit integer data type.

• EXTERNJSON int rtJsonDecInt32Value (OSCTX∗pctxt, OSINT32∗pvalue)
  This function decodes the contents of a 32-bit integer data type.

• EXTERNJSON int rtJsonDecInt64Value (OSCTX∗pctxt, OSINT64∗pvalue)
  This function decodes the contents of a 64-bit integer data type.

• EXTERNJSON int rtJsonDecUInt8Value (OSCTX∗pctxt, OSUINT8∗pvalue)
  This function decodes the contents of an unsigned 8-bit integer data type (i.e.

• EXTERNJSON int rtJsonDecUInt16Value (OSCTX∗pctxt, OSUINT16∗pvalue)
  This function decodes the contents of an unsigned 16-bit integer data type.

• EXTERNJSON int rtJsonDecUInt32Value (OSCTX∗pctxt, OSUINT32∗pvalue)
  This function decodes the contents of an unsigned 32-bit integer data type.

• EXTERNJSON int rtJsonDecUInt64Value (OSCTX∗pctxt, OSUINT64∗pvalue)
  This function decodes the contents of an unsigned 64-bit integer data type.

• EXTERNJSON int rtJsonDecMatchChar (OSCTX∗pctxt, OSUTF8CHAR ch)
  This function parses the next byte and matches it with given character.

• EXTERNJSON int rtJsonDecMatchObjectStart (OSCTX∗pctxt, const OSUTF8NameAndLen∗nameArray, size_t numNames)
  This function parses the next object start tag that matches with one of the names in the given name array.

• EXTERNJSON int rtJsonDecMatchToken (OSCTX∗pctxt, const OSUTF8CHAR∗token)
  This function decodes a JSON string and matches with a given token.
• EXTERNJSON int rtJsonDecMatchToken2 (OSCTXT *pctxt, const OSUTF8CHAR *token, size_t tokenLen)
  This function decodes a JSON string and matches with a given token.

• EXTERNJSON int rtJsonDecNameValuePair (OSCTXT *pctxt, OSUTF8NVP *pvalue)
  This function decodes a name/value pair.

• EXTERNJSON int rtJsonDecNumberString (OSCTXT *pctxt, char **ppCharStr)
  This function decodes a JSON number into a character string variable.

• EXTERNJSON int rtJsonDecPeekChar (OSCTXT *pctxt, OSUTF8CHAR *pch)
  This function read the next character.

• EXTERNJSON char rtJsonDecPeekChar2 (OSCTXT *pctxt)
  This function read the next character.

• EXTERNJSON int rtJsonDecStringObject (OSCTXT *pctxt, const OSUTF8CHAR *name, OSUTF8CHAR **ppvalue)
  This function decodes the contents of a JSON object containing a character string.

• EXTERNJSON int rtJsonDecStringValue (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This function decodes the contents of a string data type.

• EXTERNJSON int rtJsonDecXmlStringValue (OSCTXT *pctxt, OSXMLSTRING *pvalue)
  This function decodes the contents of an XML string data type.

• EXTERNJSON int rtJsonDecUCS2String (OSCTXT *pctxt, OSUNICHAR **ppstr, OSSIZE *pnchars)
  This function is used to decode input UTF-8 data into a UCS-2 / UTF-16 character string.

• EXTERNJSON int rtJsonDecUCS4String (OSCTXT *pctxt, OS32BITCHAR **ppstr, OSSIZE *pnchars)
  This function is used to decode input UTF-8 data into a UCS-4 / UTF-32 character string.

• EXTERNJSON size_t rtJsonGetElemIdx (OSCTXT *pctxt, const OSUTF8NameAndLen nameArray[], size_t nrows)
  This function parses the next start tag and finds the index of the element name in the descriptor table.

6.2.1 Function Documentation

6.2.1.1 EXTERNJSON int rtJsonDecAnyElem (OSCTXT * pctxt, OSUTF8CHAR ** ppvalue)
This function decodes an arbitrary block of JSON-encoded data into a string variable.
In this case, the expected format is element name : JSON encoded data.

Parameters

  pctxt  A pointer to a context structure. This provides a storage area for the function to store all working variables that must be maintained between function calls.

  ppvalue  A pointer to a variable to receive the decoded JSON text.
Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.2 EXTERNJSON int rtJsonDecAnyElem2 (OSCTXT * pctxt, OSUTF8CHAR ** ppvalue)

This version of rtJsonDecAnyElem assumes the element name has been pushed on the element name stack in the context.
This will be the case if rtJsonGetElemIdx is called prior to calling this function.

Parameters

pctxt A pointer to a context structure. This provides a storage area for the function to store all working variables that must be maintained between function calls.

ppvalue A pointer to a variable to receive the decoded JSON text.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.3 EXTERNJSON int rtJsonDecAnyType (OSCTXT * pctxt, OSUTF8CHAR ** ppvalue)

This function decodes an arbitrary block of JSON-encoded data into a string variable.
In this case, the expected format is a complete JSON encoded data fragment.

Parameters

pctxt A pointer to a context structure. This provides a storage area for the function to store all working variables that must be maintained between function calls.

ppvalue A pointer to a variable to receive the decoded JSON text.

Returns
Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.4 EXTERNJSON int rtJsonDecBase64Str (OSCTXT * pctxt, OSOCTET * pvalue, OSUINT32 * pnocts, size_t bufsize)

This function decodes a contents of a Base64-encode binary string into a static memory structure.
The octet string must be Base64 encoded. This function call is used to decode a sized base64Binary string production.
Parameters

\textit{pctxt} A pointer to a context structure. This provides a storage area for the function to store all working variables that must be maintained between function calls.

\textit{pvalue} A pointer to a variable to receive the decoded bit string. This is assumed to be a static array large enough to hold the number of octets specified in the bufsize input parameter.

\textit{pnocts} A pointer to an integer value to receive the decoded number of octets.

\textit{bufsize} The size (in octets) of the sized octet string. An error will occur if the number of octets in the decoded string is larger than this value.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

6.2.1.5 \texttt{EXTERNJSON int rtJsonDecBitStrValue (OSCTX\texttt{T} \ast pctxt, OSUINT32 \ast nbits, OSOCTET \ast data, OSSIZE bufsize)}

This function decodes a variable of the ASN.1 Bit string type.

Parameters

\textit{pctxt} Pointer to context block structure.

\textit{nbits} A pointer to an unsigned integer to receive the number of bits in the bit string.

\textit{data} A pointer to an OSOCTET array that will receive the decoded bit string. The array must be preallocated.

\textit{bufsize} Size of the static buffer in bytes into which the data is to be decoded.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

6.2.1.6 \texttt{EXTERNJSON int rtJsonDecBool (OSCTX\texttt{T} \ast pctxt, OSBOOL \ast pvalue)}

This function decodes a variable of the boolean type.

Parameters

\textit{pctxt} Pointer to context block structure.

\textit{pvalue} Pointer to a variable to receive the decoded boolean value.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.
6.2.1.7 EXTERNJSON int rtJsonDecDate (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'date' type.

Input is expected to be a string of characters returned by a JSON parser. The string should have CCYY-MM-DD format.

Parameters

    pctxt  Pointer to context block structure.
    pvalue OSXSDDateTime type pointer points to a OSXSDDateTime value to receive decoded result.

Returns

    Completion status of operation:
    • 0 = success,
    • negative return value is error.

6.2.1.8 EXTERNJSON int rtJsonDecDateTime (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'dateTime' type.

Input is expected to be a string of characters returned by an JSON parser.

Parameters

    pctxt  Pointer to context block structure.
    pvalue OSXSDDateTime type pointer points to a OSXSDDateTime value to receive decoded result.

Returns

    Completion status of operation:
    • 0 = success,
    • negative return value is error.

6.2.1.9 EXTERNJSON int rtJsonDecDecimal (OSCTXT * pctxt, OSREAL * pvalue, int totalDigits, int fractionDigits)

This function decodes the contents of a decimal data type.

Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

Parameters

    pctxt  Pointer to context block structure.
    pvalue Pointer to 64-bit double value to receive decoded result.
    totalDigits The total number of digits in the decimal value.
    fractionDigits The number of fractional digits in the decimal value.

Returns

    Completion status of operation:
    • 0 = success,
    • negative return value is error.
6.2.1.10  EXTERNJSON int rtJsonDecDouble (OSCTXT * pctxt, OSREAL * pvalue)

This function decodes the contents of a float or double data type.
Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

Parameters

pctxt  Pointer to context block structure.
pvalue  Pointer to 64-bit double value to receive decoded result.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.11  EXTERNJSON int rtJsonDecDynBase64Str (OSCTXT * pctxt, OSDynOctStr * pvalue)

This function decodes a contents of a Base64-encode binary string.
The octet string must be Base64 encoded. This function will allocate dynamic memory to store the decoded result.

Parameters

pctxt  A pointer to a context structure. This provides a storage area for the function to store all working variables that must be maintained between function calls.
pvalue  A pointer to a dynamic octet string structure to receive the decoded octet string. Dynamic memory is allocated for the string using the rtxMemAlloc function.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.12  EXTERNJSON int rtJsonDecDynBitStr (OSCTXT * pctxt, OSUINT32 * nbits, OSOCTET ** data)

This function decodes a variable of the ASN.1 Bit string type.

Parameters

pctxt  Pointer to context block structure.
nbits  A pointer to an unsigned integer to receive the number of bits in the bit string.
data  A pointer to an OSOCTET array that will receive the decoded bit string; the array will be allocated by the decoding function.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.
6.2.1.13 EXTERNJSON int rtJsonDecDynHexStr (OSCTXT * pctxt, OSDynOctStruct * pvalue)

This function decodes a contents of a hexBinary string.

This function will allocate dynamic memory to store the decoded result. Input is expected to be a string of OS-UTF8CHAR characters returned by a JSON parser.

**Parameters**

- **pctxt** A pointer to a context structure. This provides a storage area for the function to store all working variables that must be maintained between function calls.
- **pvalue** A pointer to a dynamic octet string structure to receive the decoded octet string. Dynamic memory is allocated to hold the string using the rtxMemAlloc function.

**Returns**

Completion status of operation:
- 0 = success,
- negative return value is error.

6.2.1.14 EXTERNJSON int rtJsonDecGDay (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'gDay' type.

Input is expected to be a string of characters returned by a JSON parser. The string should have --DD[+-hh:mmZ] format.

**Parameters**

- **pctxt** Pointer to context block structure.
- **pvalue** OSXSDDateTime type pointer points to a OSXSDDateTime value to receivedecoded result.

**Returns**

Completion status of operation:
- 0 = success,
- negative return value is error.

6.2.1.15 EXTERNJSON int rtJsonDecGMonth (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'gMonth' type.

Input is expected to be a string of characters returned by a JSON parser. The string should have --MM[+-hh:mmZ] format.

**Parameters**

- **pctxt** Pointer to context block structure.
- **pvalue** OSXSDDateTime type pointer points to a OSXSDDateTime value to receive decoded result.

**Returns**

Completion status of operation:
- 0 = success,
- negative return value is error.
6.2.1.16  EXTERNJSON int rtJsonDecGMonthDay (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'gMonthDay' type.

Input is expected to be a string of characters returned by a JSON parser. The string should have -MM-DD[-+hh:mm|Z] format.

Parameters

- pctxt  Pointer to context block structure.
- pvalue  OSXSDDateTime type pointer points to a OSXSDDateTime value to receive decoded result.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

6.2.1.17  EXTERNJSON int rtJsonDecGYear (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'gYear' type.

Input is expected to be a string of characters returned by a JSON parser. The string should have CCYY[-+hh:mm|Z] format.

Parameters

- pctxt  Pointer to context block structure.
- pvalue  OSXSDDateTime type pointer points to a OSXSDDateTime value to receive decoded result.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.

6.2.1.18  EXTERNJSON int rtJsonDecGYearMonth (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'gYearMonth' type.

Input is expected to be a string of characters returned by a JSON parser. The string should have CCYY-MM[-+hh:mm|Z] format.

Parameters

- pctxt  Pointer to context block structure.
- pvalue  OSXSDDateTime type pointer points to a OSXSDDateTime value to receive decoded result.

Returns

Completion status of operation:

- 0 = success,
- negative return value is error.
6.2.1.19  EXTERNJSON int rtJsonDecHexStr (OSCTXT * pctxt, OSOCTET * pvalue, OSUINT32 * pnocts, size_t bufsize)

This function decodes the contents of a hexBinary string into a static memory structure. Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

Parameters

pctxt A pointer to a context structure. This provides a storage area for the function to store all working variables that must be maintained between function calls.

pvalue A pointer to a variable to receive the decoded bit string. This is assumed to be a static array large enough to hold the number of octets specified in the bufsize input parameter.

pnocts A pointer to an integer value to receive the decoded number of octets.

bufsize The size (in octets) of the sized octet string. An error will occur if the number of octets in the decoded string is larger than this value.

Returns

Completion status of operation:

• 0 = success,
• negative return value is error.

6.2.1.20  EXTERNJSON int rtJsonDecInt16Value (OSCTXT * pctxt, OSINT16 * pvalue)

This function decodes the contents of a 16-bit integer data type. Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

Parameters

pctxt Pointer to context block structure.

pvalue Pointer to 16-bit integer value to receive decoded result.

Returns

Completion status of operation:

• 0 = success,
• negative return value is error.

6.2.1.21  EXTERNJSON int rtJsonDecInt32Value (OSCTXT * pctxt, OSINT32 * pvalue)

This function decodes the contents of a 32-bit integer data type. Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

Parameters

pctxt Pointer to context block structure.

pvalue Pointer to 32-bit integer value to receive decoded result.
Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.22 EXTERNJSON int rtJsonDecInt64Value (OSCTXT * pctxt, OSINT64 * pvalue)

This function decodes the contents of a 64-bit integer data type. Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

Parameters

pctxt Pointer to context block structure.
pvalue Pointer to 64-bit integer value to receive decoded result.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.23 EXTERNJSON int rtJsonDecInt8Value (OSCTXT * pctxt, OSINT8 * pvalue)

This function decodes the contents of an 8-bit integer data type (i.e. a signed byte type in the range of -128 to 127). Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

Parameters

pctxt Pointer to context block structure.
pvalue Pointer to 8-bit integer value to receive decoded result.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.24 EXTERNJSON int rtJsonDecMatchChar (OSCTXT * pctxt, OSUTF8CHAR ch)

This function parses the next byte and matches it with given character.

Parameters

pctxt Pointer to context block structure.
ch The character to be matched.
Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.25  EXTERNJSON int rtJsonDecMatchObjectStart (OSCTXT * pctxt, const OSUTF8NameAndLen * nameArray, size_t numNames)

This function parses the next object start tag that matches with one of the names in the given name array.
It also matches the the leading '{' of the object and ':' character after the name.

Parameters

  pctxt   Pointer to context block structure.
  nameArray   Array of names to be matched.
  numNames   Number of names in the name array

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.26  EXTERNJSON int rtJsonDecMatchToken (OSCTXT * pctxt, const OSUTF8CHAR * token)

This function decodes a JSON string and matches with a given token.

Parameters

  pctxt   A pointer to a context structure. This provides a storage area for the function to store all working variables
          that must be maintained between function calls.
  token   The token to be matched.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.27  EXTERNJSON int rtJsonDecMatchToken2 (OSCTXT * pctxt, const OSUTF8CHAR * token, size_t tokenLen)

This function decodes a JSON string and matches with a given token.

Parameters

  pctxt   A pointer to a context structure. This provides a storage area for the function to store all working variables
          that must be maintained between function calls.
The token to be matched.

\textit{tokenLen} The length of the token to be matched.

\textbf{Returns}

Completion status of operation:
- 0 = success,
- negative return value is error.

\subsubsection{6.2.1.28 EXTERNJSON int rtJsonDecNameValuePair (OSCTXT \* \textit{pctxt}, OSUTF8NVP \* \textit{pvalue})}

This function decodes a name/value pair.

\textbf{Parameters}

- \textit{pctxt} Pointer to context block structure.
- \textit{pvalue} Pointer to an structure to receive the decoded name and value.

\textbf{Returns}

Completion status of operation:
- 0 = success,
- negative return value is error.

\subsubsection{6.2.1.29 EXTERNJSON int rtJsonDecNumberString (OSCTXT \* \textit{pctxt}, char ** \textit{ppCharStr})}

This function decodes a JSON number into a character string variable.

\textbf{Parameters}

- \textit{pctxt} Pointer to context block structure.
- \textit{ppCharStr} Pointer to character string pointer to receive decoded value. Dynamic memory is allocated for the string using the rtxMemAlloc function.

\textbf{Returns}

Completion status of operation:
- 0 = success,
- negative return value is error.

\subsubsection{6.2.1.30 EXTERNJSON int rtJsonDecPeekChar (OSCTXT \* \textit{pctxt}, OSUTF8CHAR \* \textit{pch})}

This function read the next character.
It does not decode the value.

\textbf{Parameters}

- \textit{pctxt} Pointer to OSCTXT structure
- \textit{pch} A pointer to a variable to receive the next character.
Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.31  EXTERNJSON char rtJsonDecChar2 (OSCTXT * pctxt)

This function reads the next character.
It does not decode the value.

Parameters

pctxt  Pointer to OSCTXT structure

Returns

The peeked character, or null if there is a failure. The error will be logged in the context.

6.2.1.32  EXTERNJSON int rtJsonDecStringObject (OSCTXT * pctxt, const OSUTF8CHAR * name, OSUTF8CHAR ** ppvalue)

This function decodes the contents of a JSON object containing a character string.
Input is expected to be a complete JSON object returned by a JSON parser.

Parameters

pctxt  Pointer to context block structure.
name   The name token.
ppvalue Pointer to an string structure to receive the decoded string. Memory is allocated for the string using the run-time memory manager.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.

6.2.1.33  EXTERNJSON int rtJsonDecStringValue (OSCTXT * pctxt, OSUTF8CHAR ** ppvalue)

This function decodes the contents of a string data type.
This type contains a pointer to a UTF-8 character string. Input is expected to be a string of UTF-8 characters returned by a JSON parser.

Parameters

pctxt  Pointer to context block structure.
ppvalue Pointer to an string structure to receive the decoded string. Memory is allocated for the string using the run-time memory manager.
Returns

Completion status of operation:
- 0 = success,
- negative return value is error.

6.2.1.34  EXTERNJSON int rtJsonDecTime (OSCTXT * pctxt, OSXSDDateTime * pvalue)

This function decodes a variable of the XSD 'time' type.
Input is expected to be a string of characters returned by a JSON parser. The string should have one of following formats:
(1) hh-mm-ss.ss used if tz_flag = false (2) hh-mm-ss.ssZ used if tz_flag = false and tzo = 0
(3) hh-mm-ss.ss+HH:MM if tz_flag = false and tzo > 0 (4) hh-mm-ss.ss-HH:MM-HH:MM if tz_flag = false and tzo < 0

Parameters

pctxt  Pointer to context block structure.
pvalue  OSXSDDateTime type pointer points to a OSXSDDateTime value to receive decoded result.

Returns

Completion status of operation:
- 0 = success,
- negative return value is error.

6.2.1.35  EXTERNJSON int rtJsonDecUCS2String (OSCTXT * pctxt, OSUNICHAR ** ppstr, OSSIZE * pnchars)

This function is used to decode input UTF-8 data into a UCS-2 / UTF-16 character string.

Parameters

pctxt  A pointer to the context block structure.
ppstr  A pointer to a UTF-16 string; memory will be allocated to hold the string using the run-time memory manager.
pnchars  A pointer to an integer to hold the number of characters in the string. (The number of octets may be found by multiplying by two.)

Returns

0 on success; less than zero on error.

6.2.1.36  EXTERNJSON int rtJsonDecUCS4String (OSCTXT * pctxt, OS32BITCHAR ** ppstr, OSSIZE * pnchars)

This function is used to decode input UTF-8 data into a UCS-4 / UTF-32 character string.

Parameters

pctxt  A pointer to the context block structure.
**ppstr** A pointer to a UTF-32 string; memory will be allocated to hold the string using the run-time memory manager.

**pnchars** A pointer to an integer to hold the number of characters in the string. (The number of octets may be found by multiplying by two.)

Returns

0 on success; less than zero on error.

### 6.2.1.37 EXTERNJSON int rtJsonDecUInt16Value (OSCTXT *pctxt, OSUINT16 *pvalue)

This function decodes the contents of an unsigned 16-bit integer data type.

Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

**Parameters**

- **pctxt** Pointer to context block structure.
- **pvalue** Pointer to unsigned 16-bit integer value to receive decoded result.

**Returns**

Completion status of operation:

- 0 = success,
- negative return value is error.

### 6.2.1.38 EXTERNJSON int rtJsonDecUInt32Value (OSCTXT *pctxt, OSUINT32 *pvalue)

This function decodes the contents of an unsigned 32-bit integer data type.

Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

**Parameters**

- **pctxt** Pointer to context block structure.
- **pvalue** Pointer to unsigned 32-bit integer value to receive decoded result.

**Returns**

Completion status of operation:

- 0 = success,
- negative return value is error.

### 6.2.1.39 EXTERNJSON int rtJsonDecUInt64Value (OSCTXT *pctxt, OSUINT64 *pvalue)

This function decodes the contents of an unsigned 64-bit integer data type.

Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

**Parameters**

- **pctxt** Pointer to context block structure.
**pvalue** Pointer to unsigned 64-bit integer value to receive decoded result.

**Returns**

Completion status of operation:

- 0 = success,
- negative return value is error.

### 6.2.1.40 EXTERNJSON int rtJsonDecUInt8Value (OSCTXT * pctxt, OSUINT8 * pvalue)

This function decodes the contents of an unsigned 8-bit integer data type (i.e. a signed byte type in the range of 0 to 255). Input is expected to be a string of OSUTF8CHAR characters returned by a JSON parser.

**Parameters**

- **pctxt** Pointer to context block structure.
- **pvalue** Pointer to unsigned 8-bit integer value to receive decoded result.

**Returns**

Completion status of operation:

- 0 = success,
- negative return value is error.

### 6.2.1.41 EXTERNJSON int rtJsonDecXmlStringValue (OSCTXT * pctxt, OSXMLSTRING * pvalue)

This function decodes the contents of an XML string data type.

This type contains a pointer to a UTF-8 character string plus flags that can be set to alter the encoding of the string (for example, the cdata flag allows the string to be encoded in a CDATA section). Input is expected to be a string of UTF-8 characters returned by a JSON parser.

**Parameters**

- **pctxt** Pointer to context block structure.
- **pvalue** Pointer to an XML string structure to receive the decoded string. Memory is allocated for the string using the run-time memory manager.

**Returns**

Completion status of operation:

- 0 = success,
- negative return value is error.
6.2.1.42 EXTERNJSON size_t rtJsonGetElemIdx (OSCTXT * pctxt, const OSUTF8NameAndLen nameArray[], size_t nrows)

This function parses the next start tag and finds the index of the element name in the descriptor table.

Parameters

   pctxt  Pointer to context block structure.
   nameArray  Elements descriptor table.
   nrows  Number of descriptors in table.

Returns

Completion status of operation:

• positive or zero value is element identifier,
• negative return value is error.
Chapter 7

Class Documentation

7.1 OSJSONDecodeBuffer Class Reference

The OSJSONDecodeBuffer class is derived from the OSJSONMessageBuffer base class.

#include <OSJSONDecodeBuffer.h>

Inheritance diagram for OSJSONDecodeBuffer:

```
    OSJSONDecodeBuffer
     |                |
     v                v
  OSJSONMessageBuffer

Public Member Functions

• OSJSONDecodeBuffer (const char *jsonFile)
  This version of the OSJSONDecodeBuffer constructor takes a name of a file that contains JSON data to be decoded and constructs a buffer.

• OSJSONDecodeBuffer (const OSOCTET *msgbuf, size_t bufsiz)
  This version of the OSJSONDecodeBuffer constructor takes parameters describing a message in memory to be decoded and constructs a buffer.

• OSJSONDecodeBuffer (OSRTInputStream &inputStream)
  This version of the OSJSONDecodeBuffer constructor takes a reference to the OSInputStream object.

• virtual EXTJSONMETHOD int init ()
  This method initializes the decode message buffer.

• virtual OSBOOL isA (Type bufferType)
  This is a virtual method that must be overridden by derived classes to allow identification of the class.
Protected Attributes

- OSRTInputStream * mpInputStream
  Input source for message to be decoded.

- OSBOOL mbOwnStream
  This is set to true if this object creates the underlying stream object.

7.1.1 Detailed Description

The OSJSONDecodeBuffer class is derived from the OSJSONMessageBuffer base class. It contains variables and methods specific to decoding JSON messages. It is used to manage an input buffer or stream containing a message to be decoded.

Definition at line 40 of file OSJSONDecodeBuffer.h.

7.1.2 Constructor & Destructor Documentation

7.1.2.1 OSJSONDecodeBuffer::OSJSONDecodeBuffer (const char * jsonFile)

This version of the OSJSONDecodeBuffer constructor takes a name of a file that contains JSON data to be decoded and constructs a buffer.

Parameters

  jsonFile  A pointer to name of file to be decoded.

7.1.2.2 OSJSONDecodeBuffer::OSJSONDecodeBuffer (const OSOCTET * msgbuf, size_t bufsiz)

This version of the OSJSONDecodeBuffer constructor takes parameters describing a message in memory to be decoded and constructs a buffer.

Parameters

  msgbuf  A pointer to a buffer containing an JSON message.
  bufsiz  Size of the message buffer.

7.1.2.3 OSJSONDecodeBuffer::OSJSONDecodeBuffer (OSRTInputStream & inputStream)

This version of the OSJSONDecodeBuffer constructor takes a reference to the OSInputStream object. The stream is assumed to have been previously initialized to point at an encoded JSON message.

Parameters

  inputStream  reference to the OSInputStream object
7.1.3 Member Function Documentation

7.1.3.1 virtual EXTJSONMETHOD int OSJSONDecodeBuffer::init () [virtual]

This method initializes the decode message buffer.

Returns
  Completion status of operation:
  • 0 (0) = success,
  • negative return value is error.

7.1.3.2 virtual OSBOOL OSJSONDecodeBuffer::isA (Type bufferType) [inline, virtual]

This is a virtual method that must be overridden by derived classes to allow identification of the class.

The base class variant is abstract. This method matches an enumerated identifier defined in the base class. One identifier is declared for each of the derived classes.

Parameters
  bufferType Enumerated identifier specifying a derived class. This type is defined as a public access type in the OSRTMessageBufferIF base interface. Possible values include BEREncode, BERDecode, PEREncode, PERDecode, JSONEncode, and JSONDecode.

Returns
  Boolean result of the match operation. True if the bufferType argument is JSONDecode. argument.

Definition at line 108 of file OSJSONDecodeBuffer.h.

7.1.4 Member Data Documentation

7.1.4.1 OSBOOL OSJSONDecodeBuffer::mbOwnStream [protected]

This is set to true if this object creates the underlying stream object.

In this case, the stream will be deleted in the object’s destructor.

Definition at line 52 of file OSJSONDecodeBuffer.h.

The documentation for this class was generated from the following file:

• OSJSONDecodeBuffer.h
7.2  OSJSONEncodeBuffer Class Reference

The OSJSONEncodeBuffer class is derived from the OSJSONMessageBuffer base class.
#include <OSJSONEncodeBuffer.h>

Inheritance diagram for OSJSONEncodeBuffer:

OSJSONMessageBuffer

OSJSONEncodeBuffer

Public Member Functions

• EXTJSONMETHOD OSJSONEncodeBuffer ()
  Default constructor.

• EXTJSONMETHOD OSJSONEncodeBuffer (OSOCTET ∗pMsgBuf, size_t msgBufLen)
  This constructor allows a static message buffer to be specified to receive the encoded message.

• virtual size_t getMsgLen ()
  This method returns the length of a previously encoded JSON message.

• virtual EXTJSONMETHOD int init ()
  This method reinitializes the encode buffer to allow a new message to be encoded.

• virtual OSBOOL isA (Type bufferType)
  This is a virtual method that must be overridden by derived classes to allow identification of the class.

• void nullTerminate ()
  This method adds a null-terminator character (") at the current buffer position.

• virtual EXTJSONMETHOD long write (const char ∗filename)
  This method writes the encoded message to the given file.

• virtual EXTJSONMETHOD long write (FILE ∗fp)
  This version of the write method writes to a file that is specified by a FILE pointer.

7.2.1  Detailed Description

The OSJSONEncodeBuffer class is derived from the OSJSONMessageBuffer base class. It contains variables and methods specific to encoding JSON messages. It is used to manage the buffer into which a message is to be encoded.

Definition at line 38 of file OSJSONEncodeBuffer.h.
7.2.2  Constructor & Destructor Documentation

7.2.2.1  EXTJSONMETHOD OSJSONEncodeBuffer::OSJSONEncodeBuffer (OSOCTET * pMsgBuf, size_t msgBufLen)

This constructor allows a static message buffer to be specified to receive the encoded message.

Parameters

  pMsgBuf  A pointer to a fixed size message buffer to receive the encoded message.

  msgBufLen  Size of the fixed-size message buffer.

7.2.3  Member Function Documentation

7.2.3.1  virtual size_t OSJSONEncodeBuffer::getMsgLen () [inline, virtual]

This method returns the length of a previously encoded JSON message.

Returns

  Length of the JSON message encapsulated within this buffer object.

Definition at line 67 of file OSJSONEncodeBuffer.h.

7.2.3.2  virtual EXTJSONMETHOD int OSJSONEncodeBuffer::init () [virtual]

This method reinitializes the encode buffer to allow a new message to be encoded.

This makes it possible to reuse one message buffer object in a loop to encode multiple messages. After this method is called, any previously encoded message in the buffer will be overwritten on the next encode call.

7.2.3.3  virtual OSBOOL OSJSONEncodeBuffer::isA (Type bufferType) [inline, virtual]

This is a virtual method that must be overridden by derived classes to allow identification of the class.

The base class variant is abstract. This method matches an enumerated identifier defined in the base class. One identifier is declared for each of the derived classes.

Parameters

  bufferType  Enumerated identifier specifying a derived class. This type is defined as a public access type in the OSRTMessageBufferIF base interface. Possible values include BEREncode, BERDecode, PEREncode, PERDecode, JSONEncode, and JSONDecode.

Returns

  Boolean result of the match operation. True if the bufferType argument is JSONEncode. argument.

Definition at line 95 of file OSJSONEncodeBuffer.h.

7.2.3.4  virtual EXTJSONMETHOD long OSJSONEncodeBuffer::write (FILE *fp) [virtual]

This version of the write method writes to a file that is specified by a FILE pointer.
Parameters

`fp` Pointer to FILE structure to which the encoded message will be written.

Returns

Number of octets actually written. This value may be less than the actual message length if an error occurs.

7.2.3.5 virtual EXTJSONMETHOD long OSJSONEncodeBuffer::write (const char * `filename`) [virtual]

This method writes the encoded message to the given file.

Parameters

`filename` The name of file to which the encoded message will be written.

Returns

Number of octets actually written. This value may be less than the actual message length if an error occurs.

- OSJSONEncodeBuffer.h
7.3 OSJSONEncodeStream Class Reference

The OSJSONEncodeStream class is derived from the OSJSONMessageBuffer base class.
#include <OSJSONEncodeStream.h>

Inheritance diagram for OSJSONEncodeStream:

```
OSJSONMessageBuffer

OSJSONEncodeStream
```

**Public Member Functions**

- EXTJSONMETHOD OSJSONEncodeStream (OSRTOutputStream &outputStream)
  
  *This version of the OSJSONEncodeStream constructor takes a reference to the OSOutputStream object.*

- OSJSONEncodeStream (OSRTOutputStream *pOutputStream, OSBOOL ownStream=TRUE)
  
  *This version of the OSJSONEncodeStream constructor takes a pointer to the OSRTOutputStream object.*

- EXTJSONMETHOD int encodeAttr (const OSUTF8CHAR *name, const OSUTF8CHAR *value)
  
  *This function encodes an attribute in which the name and value are given as null-terminated UTF-8 strings.*

- EXTJSONMETHOD int encodeText (const OSUTF8CHAR *value)
  
  *This method encodes JSON textual content.*

- virtual EXTJSONMETHOD int init ()
  
  *This method reinitializes the encode stream to allow a new message to be encoded.*

- virtual OSBOOL isa (Type bufferType)
  
  *This is a virtual method that must be overridden by derived classes to allow identification of the class.*

- virtual const OSOCTET * getMsgPtr ()
  
  *This is a virtual method that must be overridden by derived classes to allow access to the stored message.*

- OSRTOutputStream * getStream () const
  
  *This method returns the output stream associated with the object.*

**Protected Attributes**

- OSRTOutputStream * mpStream
  
  *A pointer to an OSRTOutputStream object.*

- OSBOOL mbOwnStream
  
  *TRUE if the OSJSONEncodeStream object will close and free the stream in the destructor.*

- OSCTXT * mpCtxt
  
  *Internal pointer to the context structure associated with the stream for making C function calls.*
7.3.1 Detailed Description

The OSJSONEncodeStream class is derived from the OSJSONMessageBuffer base class. It contains variables and methods specific to streaming encoding JSON messages. It is used to manage the stream into which a message is to be encoded.

Definition at line 40 of file OSJSONEncodeStream.h.

7.3.2 Constructor & Destructor Documentation

7.3.2.1 EXTJSONMETHOD OSJSONEncodeStream::OSJSONEncodeStream (OSRTOutputStream & outputStream)

This version of the OSJSONEncodeStream constructor takes a reference to the OSOutputStream object.
The stream is assumed to have been previously initialized.

Parameters

outputStream reference to the OSOutputStream object

7.3.2.2 OSJSONEncodeStream::OSJSONEncodeStream (OSRTOutputStream * pOutputStream, OSBOOL ownStream = TRUE)

This version of the OSJSONEncodeStream constructor takes a pointer to the OSRTOutputStream object.
The stream is assumed to have been previously initialized. If ownStream is set to TRUE, then stream will be closed and freed in the destructor.

Parameters

pOutputStream reference to the OSOutputStream object
ownStream set ownership for the passed stream object.

7.3.3 Member Function Documentation

7.3.3.1 EXTJSONMETHOD int OSJSONEncodeStream::encodeAttr (const OSUTF8CHAR * name, const OSUTF8CHAR * value)

This function encodes an attribute in which the name and value are given as null-terminated UTF-8 strings.

Parameters

name Attribute name.
value UTF-8 string value to be encoded.

Returns

Completion status of operation:
• 0 = success,
• negative return value is error.
7.3.3.2 **EXTJSONMETHOD int OSJSONEncodeStream::encodeText (const OSUTF8CHAR ∗ value)**

This method encodes JSON textual content. JSON metadata characters are escaped. The input value is specified in UTF-8 character format.

**Parameters**

value UTF-8 string value to be encoded.

**Returns**

Completion status of operation:
- 0 = success,
- negative return value is error.

7.3.3.3 **virtual const OSOCTET ∗ OSJSONEncodeStream::getMsgPtr () [inline, virtual]**

This is a virtual method that must be overridden by derived classes to allow access to the stored message. The base class implementation returns a null value.

**Returns**

A pointer to the stored message.

Definition at line 135 of file OSJSONEncodeStream.h.

7.3.3.4 **OSRTOutputStream ∗ OSJSONEncodeStream::getStream () const [inline]**

This method returns the output stream associated with the object.

**Returns**

A pointer to the output stream.

Definition at line 142 of file OSJSONEncodeStream.h.

7.3.3.5 **virtual EXTJSONMETHOD int OSJSONEncodeStream::init () [virtual]**

This method reinitializes the encode stream to allow a new message to be encoded. This makes it possible to reuse one stream object in a loop to encode multiple messages.

7.3.3.6 **virtual OSBOOL OSJSONEncodeStream::isA (Type bufferType) [inline, virtual]**

This is a virtual method that must be overridden by derived classes to allow identification of the class. The base class variant is abstract. This method matches an enumerated identifier defined in the base class. One identifier is declared for each of the derived classes.

**Parameters**

bufferType Enumerated identifier specifying a derived class. This type is defined as a public access type in the OSRTMessageBufferIF base interface. Possible values include BEREncode, BERDecode, PEREncode, PERDecode, JSONEncode, and JSONDecode.
Returns

Boolean result of the match operation. True if the bufferType argument is JSONEncode. argument.

Definition at line 124 of file OSJSONEncodeStream.h.

7.3.4 Member Data Documentation

7.3.4.1 OSBOOL OSJSONEncodeStream::mbOwnStream [protected]

TRUE if the OSJSONEncodeStream object will close and free the stream in the destructor.
Definition at line 47 of file OSJSONEncodeStream.h.

7.3.4.2 OSCTXT∗ OSJSONEncodeStream::mpCtxt [protected]

Internal pointer to the context structure associated with the stream for making C function calls.
Definition at line 51 of file OSJSONEncodeStream.h.

7.3.4.3 OSRTOutputStream∗ OSJSONEncodeStream::mpStream [protected]

A pointer to an OSRTOutputStream object.
Definition at line 43 of file OSJSONEncodeStream.h.

The documentation for this class was generated from the following file:

• OSJSONEncodeStream.h
7.4 OSJSONMessageBuffer Class Reference

The JSON message buffer class is derived from the OSMessageBuffer base class.

```
#include <OSJSONMessageBuffer.h>
```

```
OSJSONMessageBuffer
   |   |
   OSJSONDecodeBuffer OSJSONEncodeBuffer OSJSONEncodeStream
```

Public Member Functions

- EXTJSONMETHOD int `getIndent()`
  
  This method returns current JSON output indent value.

- EXTJSONMETHOD int `getIndentChar()`
  
  This method returns current JSON output indent character value (default is space).

- EXTJSONMETHOD void `setIndent(OSUINT8 indent)`
  
  This method sets JSON output indent to the given value.

Protected Member Functions

- EXTJSONMETHOD OSJSONMessageBuffer (Type bufferType, OSRTContext ∗pContext=0)
  
  The protected constructor creates a new context and sets the buffer class type.

Parameters

- `bufferType` Type of message buffer that is being created (for example, JSONEncode or JSONDecode).
- `pContext` Pointer to a context to use. If NULL, new context will be allocated.

7.4.1 Detailed Description

The JSON message buffer class is derived from the OSMessageBuffer base class. It is the base class for the OSJSONEncodeBuffer and OSJSONDecodeBuffer classes. It contains variables and methods specific to encoding or decoding JSON messages. It is used to manage the buffer into which a message is to be encoded or decoded.

Definition at line 42 of file OSJSONMessageBuffer.h.

7.4.2 Constructor & Destructor Documentation

7.4.2.1 EXTJSONMETHOD OSJSONMessageBuffer::OSJSONMessageBuffer (Type bufferType, OSRTContext ∗pContext=0) [protected]

The protected constructor creates a new context and sets the buffer class type.
7.4.3 Member Function Documentation

7.4.3.1 EXTJSONMETHOD int OSJSONMessageBuffer::getIndent ()

This method returns current JSON output indent value.

Returns

Current indent value (>= 0) if OK, negative status code if error.

7.4.3.2 EXTJSONMETHOD int OSJSONMessageBuffer::getIndentChar ()

This method returns current JSON output indent character value (default is space).

Returns

Current indent character (> 0) if OK, negative status code if error.

7.4.3.3 EXTJSONMETHOD void OSJSONMessageBuffer::setIndent (OSUINT8 indent)

This method sets JSON output indent to the given value.

Parameters

indent Number of spaces per indent. Default is 3.

Defines

- `#define OSUPCASE 0x00008000`

  *The upper-case flag: if set, hex strings will be encoded in upper case.*

Functions

- `EXTERNJSON int rtJsonEncAnyAttr (OSCTXT *pctxt, const OSRTDList *pvalue)`

  *This function encodes a list of OSAnyAttr attributes in which the name and value are given as a UTF-8 string.*

- `EXTERNJSON int rtJsonEncIntValue (OSCTXT *pctxt, OSINT32 value)`

  *This function encodes a variable of the XSD integer type.*

- `EXTERNJSON int rtJsonEncInt64Value (OSCTXT *pctxt, OSINT64 value)`

  *This function encodes a variable of the XSD integer type.*

- `EXTERNJSON int rtJsonEncBase64StrValue (OSCTXT *pctxt, OSUINT32 nocts, const OSOCTET *value)`

  *This function encodes a variable of the XSD base64Binary type.*

- `EXTERNJSON int rtJsonEncBoolValue (OSCTXT *pctxt, OSBOOL value)`

  *This function encodes a variable of the XSD boolean type.*

- `EXTERNJSON int rtJsonEncGYear (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`

  *This function encodes a numeric gYear value into a JSON string representation.*

- `EXTERNJSON int rtJsonEncGYearMonth (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`

  *This function encodes a numeric gYearMonth value into a JSON string representation.*

- `EXTERNJSON int rtJsonEncGMonth (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`

  *This function encodes a numeric gMonth value into a JSON string representation.*

- `EXTERNJSON int rtJsonEncGMonthDay (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`

  *This function encodes a numeric gMonthDay value into a JSON string representation.*

- `EXTERNJSON int rtJsonEncGDay (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`
This function encodes a numeric gDay value into a JSON string representation.

- `EXTERNJSON int rtJsonEncDate (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`
  This function encodes a variable of the XSD ‘date’ type as a string.

- `EXTERNJSON int rtJsonEncTime (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`
  This function encodes a variable of the XSD ‘time’ type as a JSON string.

- `EXTERNJSON int rtJsonEncDateTime (OSCTXT *pctxt, const OSXSDDateTime *pvalue)`
  This function encodes a numeric date/time value into a string representation.

- `EXTERNJSON int rtJsonEncDecimalValue (OSCTXT *pctxt, OSREAL value, const OSDecimalFmt *pFmtSpec)`
  This function encodes a value of the XSD decimal type.

- `EXTERNJSON int rtJsonEncDoubleValue (OSCTXT *pctxt, OSREAL value, const OSDoubleFmt *pFmtSpec)`
  This function encodes a value of the XSD double or float type.

- `EXTERNJSON int rtJsonEncFloatValue (OSCTXT *pctxt, OSREAL value, const OSDoubleFmt *pFmtSpec)`
  This function encodes a variable of the XSD float type.

- `EXTERNJSON int rtJsonEncHexStr (OSCTXT *pctxt, OSSIZE nocts, const OSOCTET *data)`
  This function encodes a variable of the XSD hexBinary type.

- `EXTERNJSON int rtJsonEncBitStrValue (OSCTXT *pctxt, OSUINT32 nbits, const OSOCTET *data)`
  This function encodes a variable of the ASN.1 Bit string type.

- `EXTERNJSON int rtJsonEncIndent (OSCTXT *pctxt)`
  This function adds indentation whitespace to the output stream.

- `EXTERNJSON int rtJsonEncStringObject (OSCTXT *pctxt, const OSUTF8CHAR *name, const OSUTF8CHAR *value)`
  This function encodes a JSON object containing a string value.

- `EXTERNJSON int rtJsonEncStringObject2 (OSCTXT *pctxt, const OSUTF8CHAR *name, size_t nameLen, const OSUTF8CHAR *value, size_t valueLen)`
  This function encodes a JSON object containing a string value.

- `EXTERNJSON int rtJsonEncStringPair (OSCTXT *pctxt, const OSUTF8CHAR *name, const OSUTF8CHAR *value)`
  This function encodes a name/value pair.

- `EXTERNJSON int rtJsonEncStringPair2 (OSCTXT *pctxt, const OSUTF8CHAR *name, size_t nameLen, const OSUTF8CHAR *value, size_t valueLen)`
  This function encodes a name/value pair.

- `EXTERNJSON int rtJsonEncStringValue (OSCTXT *pctxt, const OSUTF8CHAR *value)`
  This function encodes a variable of the XSD string type.

- `EXTERNJSON int rtJsonEncStringValue2 (OSCTXT *pctxt, const OSUTF8CHAR *value, size_t valueLen)`
  This function encodes a variable of the XSD string type.
This function encodes a variable of the XSD string type.

- EXTERNJSON int rtJsonEncStringNull (OSCTXT *pctxt)
  This function encodes an asn.1 NULL type as string.

- EXTERNJSON int rtJsonEncStringRaw (OSCTXT *pctxt, const OSUTF8CHAR *value)
  This function encodes a raw string without any quotation.

- EXTERNJSON int rtJsonEncUnicodeData (OSCTXT *pctxt, const OSUNICHAR *value, OSSIZE nchars)
  This function encodes a variable that contains UCS-2 / UTF-16 characters.

- EXTERNJSON int rtJsonEncUCS4Data (OSCTXT *pctxt, const OS32BITCHAR *value, OSSIZE nchars)
  This function encodes a variable that contains UCS-4 / UTF-32 characters.

- EXTERNJSON int rtJsonEncUIntValue (OSCTXT *pctxt, OSUINT32 value)
  This function encodes a variable of the XSD unsigned integer type.

- EXTERNJSON int rtJsonEncUInt64Value (OSCTXT *pctxt, OSUINT64 value)
  This function encodes a variable of the XSD integer type.

- EXTERNJSON int rtJsonEncStartObject (OSCTXT *pctxt, const OSUTF8CHAR *name, OSBOOL no-Comma)
  This function encodes the beginning of a JSON object.

- EXTERNJSON int rtJsonEncEndObject (OSCTXT *pctxt)
  This function encodes the end of a JSON object.

- EXTERNJSON int rtJsonEncBetweenObject (OSCTXT *pctxt)
  This function encodes the characters separating the JSON name and value.

- EXTERNJSON int rtJsonDecAnyElem (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This function decodes an arbitrary block of JSON-encoded data into a string variable.

- EXTERNJSON int rtJsonDecAnyElem2 (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This version of rtJsonDecAnyElem assumes the element name has been pushed on the element name stack in the context.

- EXTERNJSON int rtJsonDecAnyType (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This function decodes an arbitrary block of JSON-encoded data into a string variable.

- EXTERNJSON int rtJsonDecBase64Str (OSCTXT *pctxt, OSOCTET *pvalue, OSUINT32 *pnocts, size_t bufsize)
  This function decodes a contents of a Base64-encode binary string into a static memory structure.

- EXTERNJSON int rtJsonDecDynBase64Str (OSCTXT *pctxt, OSDynOctStr *pvalue)
  This function decodes a contents of a Base64-encode binary string.

- EXTERNJSON int rtJsonDecBool (OSCTXT *pctxt, OSBOOL *value)
  This function decodes a variable of the boolean type.

- EXTERNJSON int rtJsonDecDate (OSCTXT *pctxt, OSXSDDateTime *value)
This function decodes a variable of the XSD 'date' type.

- EXTERNJSON int rtJsonDecTime (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'time' type.

- EXTERNJSON int rtJsonDecDateTime (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'dateTime' type.

- EXTERNJSON int rtJsonDecGYear (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gYear' type.

- EXTERNJSON int rtJsonDecGYearMonth (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gYearMonth' type.

- EXTERNJSON int rtJsonDecGMonth (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gMonth' type.

- EXTERNJSON int rtJsonDecGMonthDay (OSCTXT *pctxt, OSXSDDateTime *pvalue)
  This function decodes a variable of the XSD 'gMonthDay' type.

- EXTERNJSON int rtJsonDecDecimal (OSCTXT *pctxt, OSREAL *pvalue, int totalDigits, int fractionDigits)
  This function decodes the contents of a decimal data type.

- EXTERNJSON int rtJsonDecDouble (OSCTXT *pctxt, OSREAL *pvalue)
  This function decodes the contents of a float or double data type.

- EXTERNJSON int rtJsonDecHexStr (OSCTXT *pctxt, OSOCTET *pvalue, OSUINT32 *pnocts, size_t bufsize)
  This function decodes the contents of a hexBinary string into a static memory structure.

- EXTERNJSON int rtJsonDecDynHexStr (OSCTXT *pctxt, OSDynOctStr *pvalue)
  This function decodes a contents of a hexBinary string.

- EXTERNJSON int rtJsonDecDynBitStr (OSCTXT *pctxt, OSUINT32 *nbits, OSOCTET **data)
  This function decodes a variable of the ASN.1 Bit string type.

- EXTERNJSON int rtJsonDecBitStrValue (OSCTXT *pctxt, OSUINT32 *nbits, OSOCTET *data, OSSIZE bufsize)
  This function decodes a variable of the ASN.1 Bit string type.

- EXTERNJSON int rtJsonDecInt8Value (OSCTXT *pctxt, OSINT8 *pvalue)
  This function decodes the contents of an 8-bit integer data type (i.e.

- EXTERNJSON int rtJsonDecInt16Value (OSCTXT *pctxt, OSINT16 *pvalue)
  This function decodes the contents of a 16-bit integer data type.

- EXTERNJSON int rtJsonDecInt32Value (OSCTXT *pctxt, OSINT32 *pvalue)
This function decodes the contents of a 32-bit integer data type.

- EXTERNJSON int rtJsonDecInt64Value (OSCTXT *pctxt, OSINT64 *pvalue)
  This function decodes the contents of a 64-bit integer data type.

- EXTERNJSON int rtJsonDecUInt8Value (OSCTXT *pctxt, OSUINT8 *pvalue)
  This function decodes the contents of an unsigned 8-bit integer data type (i.e.

- EXTERNJSON int rtJsonDecUInt16Value (OSCTXT *pctxt, OSUINT16 *pvalue)
  This function decodes the contents of an unsigned 16-bit integer data type.

- EXTERNJSON int rtJsonDecUInt32Value (OSCTXT *pctxt, OSUINT32 *pvalue)
  This function decodes the contents of an unsigned 32-bit integer data type.

- EXTERNJSON int rtJsonDecUInt64Value (OSCTXT *pctxt, OSUINT64 *pvalue)
  This function decodes the contents of an unsigned 64-bit integer data type.

- EXTERNJSON int rtJsonDecMatchChar (OSCTXT *pctxt, OSUTF8CHAR ch)
  This function parses the next byte and matches it with given character.

- EXTERNJSON int rtJsonDecMatchObjectStart (OSCTXT *pctxt, const OSUTF8NameAndLen *nameArray, size_t numNames)
  This function parses the next object start tag that matches with one of the names in the given name array.

- EXTERNJSON int rtJsonDecMatchToken (OSCTXT *pctxt, const OSUTF8CHAR *token)
  This function decodes a JSON string and matches with a given token.

- EXTERNJSON int rtJsonDecMatchToken2 (OSCTXT *pctxt, const OSUTF8CHAR *token, size_t tokenLen)
  This function decodes a JSON string and matches with a given token.

- EXTERNJSON int rtJsonDecNameValuePair (OSCTXT *pctxt, OSUTF8NVP *pvalue)
  This function decodes a name/value pair.

- EXTERNJSON int rtJsonDecNumberString (OSCTXT *pctxt, char **ppCharStr)
  This function decodes a JSON number into a character string variable.

- EXTERNJSON int rtJsonDecStringChar (OSCTXT *pctxt, OSUTF8CHAR *pchar)
  This function read the next character.

- EXTERNJSON int rtJsonDecStringObject (OSCTXT *pctxt, const OSUTF8CHAR *name, OSUTF8CHAR **ppvalue)
  This function decodes the contents of a JSON object containing a character string.

- EXTERNJSON int rtJsonDecStringValue (OSCTXT *pctxt, OSUTF8CHAR **ppvalue)
  This function decodes the contents of a string data type.

- EXTERNJSON int rtJsonDecXmlStringValue (OSCTXT *pctxt, OSXMLSTRING *pvalue)

58
This function decodes the contents of an XML string data type.

- EXTERNJSON int rtJsonDecUCS2String (OSCTXT *pctxt, OSUNICHAR **ppstr, OSSIZE *pnchars)
  This function is used to decode input UTF-8 data into a UCS-2 / UTF-16 character string.

- EXTERNJSON int rtJsonDecUCS4String (OSCTXT *pctxt, OS32BITCHAR **ppstr, OSSIZE *pnchars)
  This function is used to decode input UTF-8 data into a UCS-4 / UTF-32 character string.

- EXTERNJSON size_t rtJsonGetElemIdx (OSCTXT *pctxt, const OSUTF8NameAndLen nameArray[], size_t nrows)
  This function parses the next start tag and finds the index of the element name in the descriptor table.

8.5.1 Detailed Description

JSON low-level C encode/decode functions.
Definition in file osrtjson.h.

8.5.2 Define Documentation

8.5.2.1 #define OSUPCASE 0x00008000

The upper-case flag: if set, hex strings will be encoded in upper case.
Definition at line 96 of file osrtjson.h.
8.6  rtJsonCppMsgBuf.h File Reference

This file is deprecated.
#include "rtsrc/asn1CppTypes.h"
#include "rtjsonsrc/OSJSONEncodeBuffer.h"
#include "rtjsonsrc/OSJSONEncodeStream.h"
#include "rtjsonsrc/OSJSONDecodeBuffer.h"

8.6.1  Detailed Description

This file is deprecated. Users should use one or more of the individual headers files defined in the include statements below.

Definition in file rtJsonCppMsgBuf.h.
8.7  rtJsonExternDefs.h File Reference

JSON external definitions macro.

8.7.1  Detailed Description

JSON external definitions macro. This is used for Windows to properly declare function scope within DLL's. Definition in file rtJsonExternDefs.h.
